

Website Development

Analytics Required

1. Traffic & Visitors

- **Total Visitors / Users** → How many people visit your site in a given period.
 - **New vs Returning Visitors** → Are people coming back, or just visiting once?
Returning = trust & stickiness.
 - **Traffic Sources** → Where are people coming from?
 - Direct (typed your URL)
 - Organic Search (Google etc.)
 - Social (Twitter, LinkedIn)
 - Referral (other websites)
 - Email (your Mailchimp campaigns)
-

2. Engagement

- **Pages per Session** → Are visitors exploring or just bouncing?
 - **Average Time on Page** → Useful to check if blogs/reports are actually being read.
 - **Bounce Rate** → % of users who leave after 1 page. High = maybe poor UX, irrelevant traffic, or weak content.
 - **Top Pages Viewed** → Which blogs, stock reports, or landing pages get the most traction.
-

3. Conversion Metrics

Since we run a subscription model, we need to track:

Below is the conversion funnel:

Website traffic → Newsletter → Sample Report → Subscription

or

Website traffic → Sample Report → Subscription

I want to see conversion at each point here.

- **Email Signups** → % of people subscribing to your free newsletter/blog updates.
 - **Trial / Sample Report Downloads** → Indicator of interest.
 - **Sample Report Conversion:** Conversion from people who download sample report
 - **Paid Conversions** → How many actually buy CORE or Quant.
 - **Conversion Rate** → $\text{Conversions} \div \text{Total Visitors}$ (benchmark this).
-

4. Premium Subscriber Behavior

- Company each unique subscriber is looking at
 - Which company / paid content has seen most engagement
 - **Login Frequency** → Are subscribers actually using CORE?
-

5. Technical Health

- **Mobile vs Desktop traffic**
 - **Site Speed** → Slow pages kill retention.
 - **Broken Pages (404 errors)**
 - **Heatmaps / User Flow (via Hotjar or GA4)** → To see how users move around and where they drop off.
 - **Integrations health:** Some metric to check if all integrations like cashfree, digio etc are working fine.
-

6. Business Aspect

- **Total Active Subscribers** → Your base at any given time.

- **Total Paid Subscribers** → Since we might issue some premium subscribers for free of cost to friends & family
- **New Paid Subscribers (Onboarded)** → How many joined in the last week/month/quarter.
- **Renewals vs Non-Renewals** → Percentage of subscribers who renewed after 1 year.
- **Churn Rate** → % of people who *don't* renew or cancel.
- **Subscribers Nearing Renewal** → Flag people ~30 days before expiry.
- **Total Revenue Collected** (month, quarter, YTD).
- **Revenue by Product** (Product 1, Product 2, Product 3)
